

# FiPool (FIP) - Whitepaper

Empowering decentralized liquidity with intelligent pairing strategies.

FiPool (FIP) is a Solana-based token designed to enable efficient and secure liquidity provisioning across decentralized exchanges.

With a total supply of 10 million FIP and a focused circulating supply of 1 million, the project aims to sustain long-term value by concentrating liquidity in ultra-secure pools.

FiPool is the core utility and governance token for the FIPX ecosystem, where it powers liquidity strategies and connects assets through carefully managed swap routes.

It supports key trading pairs such as FIP/USDC, FIP/SOL, and FIP/INC, with liquidity deployed on Raydium using ultra-concentrated ranges to optimize visibility and market depth.

Our long-term vision is to establish a \$100,000 ecosystem using self-controlled liquidity strategies, creating a reference model for sustainable DeFi token growth.
