

concentrated liquidity provisioning on decentralized exchanges like Raydium. FiPool empowers ecosystem builders to bootstrap token value while retaining precise control over swap ranges, slippage zones, and depth. The project promotes capital efficiency by enabling structured, low-risk liquidity flows and simulates market presence even in early-stage adoption, making it ideal for tokens seeking stable exposure.

3. Supply and Tokenomics

- Token Generation Date (TGE): 07/12/2024

- Max Supply: 1,000,000 FIP

- Total Supply: 1,000,000 FIP

- Circulating Supply: 1,000,000 FIP

- Decimals: 9

- Burned Wallet: N/A

- Locked/Vested Wallets: N/A

Initial Allocation:

- 100% allocated to ecosystem-controlled wallets
- No private/public sale
- No cliff or vesting
- 100% supply released at TGE for controlled liquidity provisioning

Additional Notes:

The full 1,000,000 tokens are actively used in manually managed liquidity pools across Raydium.

These pools use ultra-concentrated swap ranges to ensure stable price visibility. The FIP token is

| central to the FIPX ecosystem, supporting swap simulations, symbolic APR, and foundational |
|--|
| liquidity for other tokens like INC. |
